Yes let's do it! We definitely want to confirm the config and networking. Would like to estimate 40 clients running 4k@60fps 422, so would need to be 100Gb to the switch.

Best,

Matt Tape

Thanks for sending this over, Harry.

I connected with James last week to confirm the specs for the Peloton expansion, and this is the confirmed drawing that will work in their environment. The attached diagram should still align with their current workflow as well.

I'll go ahead and put together a refreshed quote for you in the meantime.
Let me know if you need anything else as well.

Also is there anything I should prepare for the UK expansion?

Hi Harry,

Yes, we provide remote services and can support your team and/or Peloton's team in getting everything up and running. Happy to introduce you to our technical team if you'd like to go deeper on what that looks like or have specific questions.

ECS is the distributor and provides the hardware at cost. You would purchase that portion directly through them and can apply your own markup as needed. I shared the official ECS quote just to help get the process moving.

Let me know what questions come up or if you'd like me to connect you with the team.

Tom

Hi Tom, Thanks for the intro.

Hi Mike and Team CineSys,

Nice to meet you.

What we need now is the email address of the person who will help to complete our account application on behalf of CineSys Inc through DocuSign.
Once that is filled out and returned with the necessary info, we will be able to get you onboarded.
There is a possibility that company financials are needed to establish NET payment terms.
I can definitely put the right person in contact with our credit department when needed.

Thank you and looking forward to supporting your business.

Best Regards,

Andy Sun
Account Director

Hi Harry,

Attached is the updated quote for the one or two-year expansion. This includes an additional needed year of support renewal if you are to go with two years, which would extend coverage through February 2028. The hardware quote expires on the 24th, so please reach out to Andy if you need a refresher. Confirm with him on pricing since the market is so volatile by that date.

Jon Jon will follow up separately with the performance verification details on the drawing. Let me know if you have any questions once you’ve had a chance to review.

Thanks,
Tom

Hi Harry,

Yes, the performance verification is a specific deliverable of the PS-XCONFIG line item (Implementation, Configuration & Commissioning).
As part of the commissioning process, our Professional Services team can perform benchmark testing to validate that the system meets the performance requirements.

All the best and hope to catch up soon,

Jon Jon San Juan

Hi Matt and Harry,

Just reaching out as Harry is boarding a flight and asked for confirmation on the updated drawings and we were texting.

The drawing Jon Jon sent over aligns with the quote and includes the additional H16s. On slide 2, the orange reflects the existing onsite build, and the blue shows the new H16 expansion. This would add two new units and bring the system up to roughly 800TB.

You should have everything you need from us, but if you're seeing something different or need any adjustments, just let us know and we'll take care of it.

Tom

Hey Tom,

The performance request seems outdated.

Requirement of ~1.3 GB/s

- 2 Ingest servers recording 8 channels each of ProRes HD 59.94 42MB/s per stream
- 9 Editors Working 1 streams each of ProRes HD 59.94 42MB/s per stream
- 1 Editors Working 5 streams each of ProRes HD 59.94 42MB/s per stream

30 Editors at 1 stream
4 Editors at 5 streams

The codec will most likely be XAVC Intra 4K@60, but that is similar MB/s as ProResHD

Best,

Matt Tape

Can the storage handle 5GB/s? Honestly, just looking to see max throughput of the proposed system and we can divvy up the rest.

Hi Matt,

Yes, with the additional H16 modules, the diagram indicates the solution provides up to 10GB/s, which is also expandable.

Best regards,

Jon Jon San Juan

Hi Matt,

Please find the updated diagram attached reflecting the revised performance requirements.

All the best,

Jon Jon San Juan

Hi Matt and Harry,

Just wanted to check in and make sure you have everything you need from us. If there's anything missing, any questions, or if it would be helpful to talk something through, we're here and happy to help.

Let me know what you're thinking.
Hope everyone is having a great day!

Tom
